

Acidic

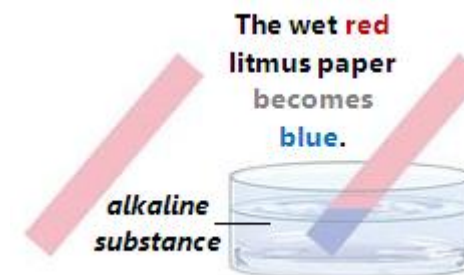

Sour taste.

Neutral

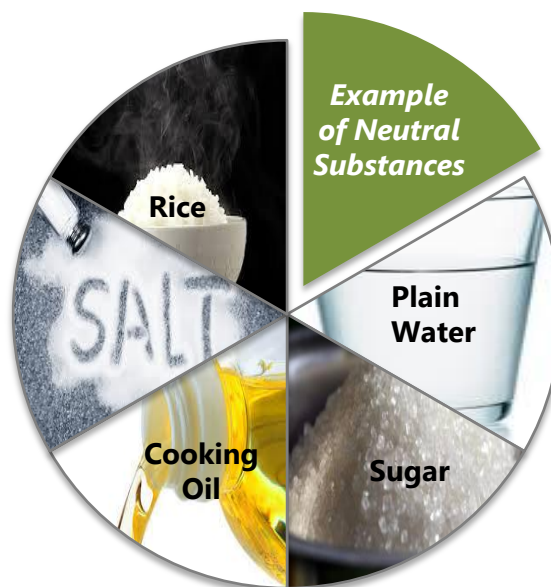

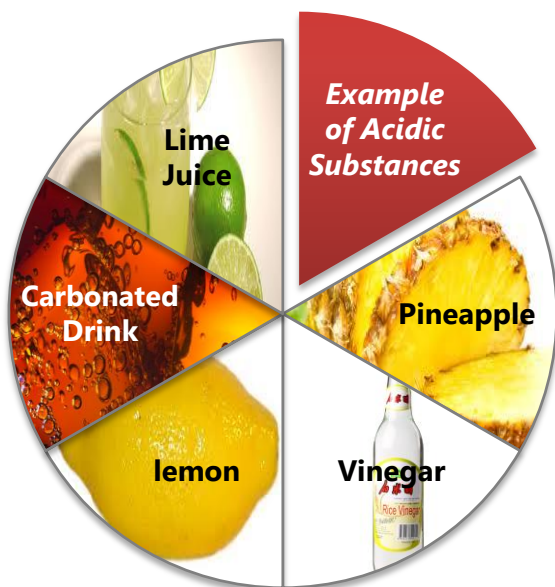

Neutral substances do not change the colour of blue and red litmus paper.

Tasteless, sweet or salty.

Alkaline

Bitter taste and 'soapy' feel when touch.

Note: Litmus paper is an indicator that tell us if something is an acid or an alkali, but it cannot tell us how strong the acid or alkali is. There are blue litmus paper (to test acidic substances) and red litmus paper (to test alkaline substances).
